

Sergey Chekriy

Web3 Architect | Senior Blockchain Developer | DeFi / Trading Systems

Email: chekriy@gmail.com

Remote (US timezone overlap)

Client testimonials: video testimonials

BPMN course: BPMN course

SUMMARY

Web3 architect and senior Solidity developer with 25+ years of engineering experience and 8+ years in DeFi and blockchain systems.

Designs and builds production-grade smart contracts and trading systems, including DEX architectures, tokenomics, and high-risk financial logic (liquidations, leverage, funding).

Former Chief IT Architect at Societe Generale and CTO of a blockchain startup. Hands-on builder who owns systems end-to-end from design to deployment.

Strong focus on correctness, security, and real-world performance in financial systems.

Actively leverages AI-assisted development tools (Cursor, LLMs) to accelerate delivery and reduce time-to-MVP, while maintaining strict validation and architectural control over security-critical components such as smart contracts, trading logic, and financial calculations.

CORE SKILLS

- Solidity, EVM, DeFi protocols, DEX, perpetual futures, tokenomics
- Algorithmic trading systems (crypto and traditional markets)
- Node.js, TypeScript, microservices, event-driven systems
- PostgreSQL, MongoDB, Kafka, AWS and other cloud platforms, Nginx, Linux server deployment and hardening
- Web3 integration (ethers.js, wallets, RPC, indexers)
- System architecture (on-chain/off-chain hybrid systems)

PROFESSIONAL EXPERIENCE

DXFund.net (DXfund.eth)

06/2020 — now

CTO

Leading technology and infrastructure for a private systematic trading research lab operating proprietary strategies on shareholder portfolios. Responsible for architecture and development of research, backtesting, data processing, ML experimentation, deployment, monitoring, and live execution infrastructure.

Key focus areas include strategy automation, historical market data pipelines, feature engineering, model evaluation, signal validation, trading system reliability, execution workflows, infrastructure security, and production operations. The platform supports controlled research-to-production delivery, with clear separation between experimental research, validated strategies, ML-based signals, and live portfolio operations.

Consulting — Web3 Architect / Blockchain Developer

2017 – Present

Core responsibilities: - Designed and shipped smart contracts for DeFi protocols (staking, lending, tokenomics, governance)

- Architected hybrid on-chain/off-chain systems for trading and high-load Web3 platforms
- Led system design from requirements → architecture → implementation → audit readiness
- Worked directly with founders on protocol design, tokenomics, and product strategy

DeFi / Trading Systems

- Designed architectures for DEX platforms (AMM, orderbook, hybrid), including development of a custom blockchain optimized for trading performance and low-latency execution
- Implemented core logic for perpetual futures systems (position lifecycle, margin, leverage, funding)
- Designed liquidation engines with strict safety guarantees
- Integrated oracle systems (Chainlink / Pyth-style) with validation and manipulation protection
- Built tokenomics systems (staking, rewards, fee distribution, buyback & burn)

Algorithmic Trading & Bots

- Designed and implemented algorithmic trading systems for crypto and traditional markets (equities, futures)
- Built automated trading bots with signal-based strategies and risk management
- Developed backtesting frameworks and strategy validation pipelines
- Implemented real-time market data processing and execution logic

Security & Reliability

- Designed systems with precision-safe math (no floating-point risk)
- Applied best practices: reentrancy protection, oracle safety, deterministic state transitions
- Participated in smart contract audits and remediation

Impact

- Delivered 50+ smart contract systems across DeFi, NFT, and tokenization
- Built systems handling high-frequency trading-style workloads
- Led multiple Web3 products from 0 → MVP → production
- Managed and mentored engineering teams of up to 20+ developers

Glass Cube — CTO

2017 – 2019

- Led development of an enterprise blockchain platform
- Managed a team of 20+ engineers
- Defined system architecture and technical roadmap

Societe Generale (Rosbank) — Chief IT Architect

2016 – 2017

- Led enterprise architecture and digital transformation
- Designed scalable financial system architectures
- Introduced data-centric and BPM-based systems

EARLY CAREER

Senior IT leadership roles across British American Tobacco, Eli Lilly, and Unimilk (later part of Danone)

- Led enterprise IT strategy and architecture
- Managed large teams and complex systems
- Delivered ERP, CRM, BI, and transformation programs

EDUCATION

Ph.D. in Computer Science
Moscow Aviation Institute — Applied Mathematics
